

VOLUME SIX HUNDRED AND THIRTEEN

METHODS IN ENZYMOLOGY

Enzymes of Energy Technology

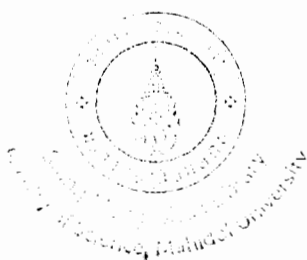

Edited by

FRASER ARMSTRONG

Department of Chemistry

University of Oxford

Oxford, United Kingdom

ACADEMIC PRESS

An imprint of Elsevier

Contents

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
1. Purification of fully active and crystallizable photosystem II from thermophilic cyanobacteria	1
Keisuke Kawakami and Jian-Ren Shen	
1. Introduction	2
2. Growth and harvest of cells	3
3. Isolation of thylakoid membranes	4
4. Isolation of crude PSII particles	4
5. Purification of PSII dimers	7
6. Characterization of the purified PSII core dimers	9
7. Crystallization of purified PSII dimers	13
Acknowledgments	14
References	14
2. Production and manipulation of blue copper oxidases for technological applications	17
Simeng Zhou, Pierre Rousselot-Pailley, Lu Ren, Yolande Charmasson, Elise Courvoisier Dezord, Viviane Robert, Thierry Tron, and Yasmina Mekmouche	
1. Introduction	19
2. Heterologous production of fungal laccases	22
3. General purification procedure and characterization	41
4. Applications	47
5. Conclusions	56
Acknowledgment	56
References	56
Further reading	60
3. Production and spectroscopic characterization of lytic polysaccharide monoxygenases	63
Glyn R. Hemsworth, Luisa Ciano, Gideon J. Davies, and Paul H. Walton	
1. introduction	64
2. Expression and purification of LPMOs	67

3. EPR spectroscopy	75
Acknowledgments	86
References	86
Further reading	90
4. A novel overproduction system for the structural determination of a proton-pumping hydrogen-producing [NiFe]-hydrogenase	91
Rhiannon M. Evans and Stephen E. Beaton	
1. Introduction	92
2. Overproduction of fully formed holo-Hyd-2	96
3. Biochemical and electrochemical analysis of overproduced Hyd-2 reveals fully formed and active Hyd-2-OP	108
4. Structural characterization leading to a proposal for the full membrane-bound structure of Hyd-2	110
5. Conclusions	113
Acknowledgments	113
References	114
5. O₂-tolerant [NiFe]-hydrogenases of <i>Ralstonia eutropha</i> H16: Physiology, molecular biology, purification, and biochemical analysis	117
Oliver Lenz, Lars Lauterbach, and Stefan Frielingsdorf	
1. Introduction	118
2. Physiology	120
3. Molecular biology	125
4. Hydrogenase purification	131
5. Biochemical analyses	138
6. Summary and conclusion	146
References	147
6. Cytoplasmic and membrane-bound hydrogenases from <i>Pyrococcus furiosus</i>	153
Chang-Hao Wu, Dominik K. Haja, and Michael W.W. Adams	
1. Introduction	154
2. Expression strategy	156
3. Large-scale growth of recombinant <i>P. furiosus</i> strains	159
4. Purification of SHI	159
5. Purification of C-MBH and S-MBH	160
6. Assays	162

7. Catalytic properties of SHI and MBH	164
8. Summary and conclusions	165
Acknowledgments	166
References	166
7. Characterization of the [NiFeSe] hydrogenase from <i>Desulfovibrio vulgaris</i> Hildenborough	169
Sónia Zacarias, Marisela Vélez, Marcos Pita, Antonio L. De Lacey, Pedro M. Matias, and Inês A.C. Pereira	
1. Introduction	170
2. Preparation of the native [NiFeSe] hydrogenase from <i>D. vulgaris</i> Hildenborough	176
3. Production of the recombinant <i>D. vulgaris</i> Hildenborough [NiFeSe] hydrogenase	179
4. Hydrogenase activities	183
5. Structure determination of <i>D. vulgaris</i> Hildenborough [NiFeSe] hydrogenase by X-ray crystallography	188
6. <i>D. vulgaris</i> Hildenborough [NiFeSe] hydrogenase biophysical characterization	193
Acknowledgments	196
References	196
8. [FeFe]-hydrogenases from green algae	203
Vera Engelbrecht and Thomas Happe	
1. Introduction	204
2. Discovery and isolation of novel algal [FeFe]-hydrogenases	204
3. Methods of characterization	217
4. Conclusion and outlook	222
Acknowledgments	223
References	224
9. Application of affinity purification methods for analysis of the nitrogenase system from <i>Azotobacter vinelandii</i>	231
Emilio Jiménez-Vicente, Julia Sanchez Martin Del Campo, Zhi-Yong Yang, Valerie L. Cash, Dennis R. Dean, and Lance C. Seefeldt	
1. Introduction	232
2. The nitrogenase systems in <i>A. vinelandii</i>	233
3. Strategies for application of affinity purification to the nitrogenase system	236

4. Methods	240
5. Conclusions	251
References	252
10. Membrane-spanning electron transfer proteins from electrogenic bacteria: Production and investigation	257
Colin W.J. Lockwood, Jessica H. van Wonderen, Marcus J. Edwards, Samuel E.H. Piper, Gaye F. White, Simone Newton-Payne, David J. Richardson, Thomas A. Clarke, and Julea N. Butt	
1. Introduction	258
2. Purification of the outer membrane-spanning MtrCAB complex from <i>S. oneidensis</i> MR-1	260
3. Purification of recombinant MtrAB and MtrC from <i>S. oneidensis</i> MR-1	263
4. Redox characterization of <i>S. oneidensis</i> MR-1 outer membrane cytochromes	268
5. Protein-protein interactions	270
6. Conclusion and prospects	273
Acknowledgments	273
References	274
11. Reductive activation of CO₂ by formate dehydrogenases	277
Dimitri Niks and Russ Hille	
1. Introduction	277
2. Air sensitivity	280
3. Reversibility of the reaction: CO ₂ reduction	284
4. Native enzyme preparations	285
5. Recombinant enzyme preparations	290
6. Summary	293
References	293
12. Production and properties of enzymes that activate and produce carbon monoxide	297
Rodney Burton, Mehmet Can, Daniel Eskilsen, Seth Wiley, and Stephen W. Ragsdale	
1. Introduction	298
2. Culturing the microbes	298
3. Purification of CODH, ACS, and CODH/ACS	302
4. Characterization of CODH, ACS, and CODH/ACS	307

5. Closing and future directions	319
Acknowledgments	320
References	320
13. Genetic techniques for studies of methyl-coenzyme M reductase from <i>Methanosarcina acetivorans</i> C2A	325
Dipti D. Nayak and William W. Metcalf	
1. Introduction	326
2. CRISPR-Cas9 genome editing in <i>Methanosarcina</i> spp.	329
3. Construction of mutagenic plasmids to introduce a TAP tag at the <i>mcr</i> locus in <i>M. acetivorans</i> C2A	334
4. Affinity purification of TAP-tagged MCR from <i>M. acetivorans</i> C2A	341
Acknowledgments	345
References	345
14. Navigating methane metabolism: Enzymes, compartments, and networks	349
David A. Collins and Marina G. Kalyuzhnaya	
1. Culturing methanotrophs	350
2. Genetic manipulation of methanotrophs	360
3. Protocol 3. Genetic alterations	362
4. Microscopy methods	367
5. Systems level characterization	373
6. Data Integration	376
References	380
Further reading	383
