# Contents

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
<b>1. Enzymatic polymerization to polyesters in nonaqueous solvents</b>	<b>1</b>
Hua Zhao	
1. Introduction	2
2. General methods	4
3. Enzymatic polycondensation	5
4. Enzymatic ring-opening polymerization (ROP)	9
5. Conclusions	16
Acknowledgments	16
References	16
<b>2. Integrating computational and experimental methods for efficient biocatalytic synthesis of polyesters</b>	<b>23</b>
Alessandro Pellis and Lucia Gardossi	
1. Introduction	24
2. Covalent immobilization of hydrolases and their application in the solvent-free synthesis of biobased polyesters	27
3. Covalent immobilization of CaLB on functionalized rice husk for the fully renewable synthesis of poly(itaconate)s	37
4. Design of experiments (DoE) applied to the analysis of the effect of experimental factors in an enzymatic polycondensation	47
5. Conclusions	53
Acknowledgments	53
References	53
<b>3. Multiple grafting to enzymatically synthesized polyesters</b>	<b>57</b>
Muhammad Humayun Bilal, Razan Alaneed, Jonas Steiner, Karsten Mäder, Markus Pietzsch, and Jörg Kressler	
1. Introduction	58
2. Experimental part	60
3. Synthesis and polymer characterization	75
4. Application of multiple grafted polyesters	88

5. Conclusion	93
Acknowledgments	93
References	94
<b>4. Tailored biosynthesis of polyhydroxyalkanoates in chemostat cultures</b>	<b>99</b>
Véronique Amstutz, Nils Hanik, Julien Pott, Camila Utsunomia, and Manfred Zinn	
1. Introduction	100
2. Biosynthesis of PHA in chemostat culture	104
3. Tailored composition of PHA in chemostat culture	109
4. Purification of PHAs	111
5. Quantification and characterization of PHAs	112
6. Conclusions	120
Acknowledgments	120
References	121
<b>5. Biocatalytic synthesis of polylactate and its copolymers by engineered microorganisms</b>	<b>125</b>
So Young Choi, In Jin Cho, Youngjoon Lee, Seongjin Park, and Sang Yup Lee	
1. Introduction	127
2. Key enzymes for polymerization of lactate	132
3. Microbial strain development for the one-step production of LA-containing polyester	147
4. Summary and conclusion	154
Acknowledgments	158
References	158
Further reading	162
<b>6. Enzymatic synthesis and modification of high molecular weight DNA using terminal deoxynucleotidyl transferase</b>	<b>163</b>
Sonal Deshpande, Yunqi Yang, Ashutosh Chilkoti, and Stefan Zauscher	
1. Introduction	164
2. Biochemical requirements for TdT mediated polymerization	166
3. Applications	172
4. Materials	175
5. Protocol for solution polymerization and characterization	177

6. Protocol for surface-initiated enzymatic polymerization (SIEP) and characterization	179
7. Summary	184
Acknowledgments	184
References	184
<b>7. Enzymatic synthesis of functional amylosic materials and amylose analog polysaccharides</b>	<b>189</b>
Jun-ichi Kadokawa	
1. Introduction	190
2. Synthesis of amylose by glucan phosphorylase-catalyzed polymerization	194
3. Enzymatic synthesis of functional amyloses	198
4. Enzymatic synthesis of amylose analog polysaccharides	202
5. Conclusion	208
Acknowledgments	209
References	209
<b>8. Synthesis of glycomonomers via biocatalytic methods</b>	<b>215</b>
Azis Adharis and Katja Loos	
1. Introduction	216
2. Lipase-catalyzed synthesis of glycomonomers	222
3. Protease-catalyzed synthesis of glycomonomers	227
4. Glycosidase-catalyzed synthesis of glycomonomers	231
5. Glycosyltransferase-catalyzed synthesis of glycomonomers	239
6. Summary	242
Acknowledgments	242
References	242
<b>9. Enzyme-initiated free radical polymerizations of vinyl monomers using horseradish peroxidase</b>	<b>249</b>
Kyle J. Rodriguez, Michela M. Pellizzoni, Robert J. Chadwick, Chao Guo, and Nico Bruns	
1. Introduction	250
2. Free radical polymerizations of vinyl monomers using horseradish peroxidase	253
3. Polymer characterization	256
4. Conclusions	260
Acknowledgments	261
References	261

<b>10. Biocatalytic ATRP in solution and on surfaces</b>	<b>263</b>
Kyle J. Rodriguez, Michela M. Pellizzoni, Mohammad Divandari, Edmondo M. Benetti, and Nico Bruns	
1. Introduction	264
2. BioATRP in solution	266
3. BioATRP on surfaces	277
4. Conclusions	286
Acknowledgments	287
References	287
<b>11. Enzyme-initiated reversible addition – fragmentation chain transfer (RAFT) polymerization: Precision polymer synthesis via enzymatic catalysis</b>	<b>291</b>
Xiao Wang and Zesheng An	
1. Introduction	292
2. Protocols for RAFT polymerization using HRP/H <sub>2</sub> O <sub>2</sub> /ACAC initiating system	300
3. Protocols for RAFT polymerization using P2Ox-HRP cascade catalysis	308
4. Conclusions	315
Acknowledgments	315
References	315
<b>12. Radical addition polymerization: Enzymatic template-free synthesis of conjugated polymers and their nanostructure fabrication</b>	<b>321</b>
Jorge Romero-García, Antonio Ledezma-Pérez, Manuel Martínez-Cartagena, Carmen Alvarado-Canché, Paola Jiménez-Cárdenas, Arxel De-León, and Carlos Gallardo-Vega	
1. Introduction	322
2. Radical addition polymerization: Enzymatic template-free synthesis of conjugated polymers	324
3. Nanostructure fabrication by enzymatic template-free synthesis of conjugated polymers	330
4. Conclusions	335
Acknowledgments	335
References	335
Further reading	337

---

<b>13. Surface functionalization of polyester</b>	<b>339</b>
Felice Quartinello, Georg M. Guebitz, and Doris Ribitsch	
1. Introduction	340
2. Protocols	346
Acknowledgments	356
References	357
