Contents

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
1. Molecular snapshots of dynamic membrane-bound metabolons	1
Jean-Etienne Bassard and Tomas Laursen	
1. Introduction	2
2. SMA copolymer preparation	6
3. Preparation of <i>S. bicolor</i> microsomes	9
4. Isolation of membrane-bound metabolons from native membranes	13
5. Characterization of SMALPs containing P450 metabolons	18
6. Summary and conclusion	19
References	22
2. Tricarboxylic acid metabolon	29
Fei Wu and Shelley D. Minteer	
1. Introduction	30
2. Preparation of cross-linked native TCA metabolon	32
3. Preparation of recombinant TCA metabolon	34
4. Mass spectrometric analysis of the Krebs cycle metabolon	37
5. Cross-linking techniques have allowed for the isolation of the intact metabolon	39
6. Conclusions	42
References	43
3. Metabolon formation by chemotaxis	45
Xi Zhao and Ayusman Sen	
1. Introduction	46
2. Chemotactic assembly of enzyme cascade	51
3. Summary	60
Acknowledgments	60
References	60
4. Cloning, expression, and purification of intact polyketide synthase modules	63
Laurence Maschio, Alice E. Parnell, Nicholas R. Lees, Christine L. Willis, Christiane Schaffitzel, James E.M. Stach, and Paul R. Race	
1. Introduction	64
2. Cloning of intact PKS modules	69

3. Design, assembly and cloning of multimodular PKS polypeptides	72
4. Recombinant over-expression and purification of intact PKS modules in <i>E. coli</i>	74
5. Characterization and visualization of PKS modules by electron microscopy	78
6. Conclusion	80
Acknowledgments	81
References	81
5. Repurposing peroxisomes for microbial synthesis for biomolecules	83
Jiaoqi Gao and Yongjin J. Zhou	
1. Introduction	84
2. Characteristics of peroxisomes	85
3. Peroxisome compartmentalization for biomanufacturing	90
4. Conclusions	106
References	107
6. Studying <i>trans</i>-acting enzymes that target carrier protein-bound amino acids during nonribosomal peptide synthesis	113
Anja Greule, Louise K. Charkoudian, and Max J. Cryle	
1. Introduction	114
2. In vitro studies of AA-modifying <i>trans</i> -acting enzymes during NRPS synthesis	132
3. Concluding remarks	147
References	149
7. Cargo encapsulation in bacterial microcompartments: Methods and analysis	155
Taylor M. Nichols, Nolan W. Kennedy, and Danielle Tullman-Ercek	
1. Introduction	156
2. Practical considerations for cargo encapsulation	159
3. Assays for microcompartment analysis	166
4. Summary and conclusion	181
Acknowledgments	182
References	182
8. Bacterial bioreactors: Outer membrane vesicles for enzyme encapsulation	187
Kendrick B. Turner, Scott N. Dean, and Scott A. Walper	
1. Introduction	188
2. Directed packaging of bacterial OMVs	189
3. Methods for the purification of OMVs	196

4. Characterization and quantitation of OMVs	204
5. Assaying enzyme activity	209
6. Conclusions	213
Acknowledgments	214
Competing interests	214
References	214
9. TXTL-based approach to synthetic cells	217
Jonathan Garamella, David Garenne, and Vincent Noireaux	
1. Introduction	218
2. TXTL protein expression	222
3. TXTL encapsulation in liposomes	227
4. Concluding remarks	237
Acknowledgments	237
Conflict of interest	237
References	238
10. Cell-surface display of designer cellulosomes by <i>Lactobacillus plantarum</i>	241
Yonit Ben-David, Sarah Morais, Johanna Stern, Itzhak Mizrahi, and Edward A. Bayer	
1. Introduction	242
2. Construction of plasmids for secretion of designer cellulosome components	244
3. Electroporation of <i>L. plantarum</i> cells	246
4. Protein expression in <i>L. plantarum</i>	249
5. Functionality and quantification of the secreted proteins	251
6. Functionality and quantification of anchored proteins	255
7. Display of designer cellulosomes on <i>L. plantarum</i> cells	256
8. Concluding remarks	260
References	260
11. Enzyme colocalization in protein-based hydrogels	265
Louis Lancaster, Beyza Bulutoglu, Scott Banta, and Ian Wheeldon	
1. Introduction	266
2. Protein design, expression, and purification of functional hydrogels	267
3. Material characterization of hydrogels	271
4. Kinetic characterization	278
5. Concluding remarks	282
Acknowledgments	283
References	283

12. DNA binding adaptors to assemble proteins of interest on DNA scaffold	287
Eiji Nakata, Huyen Dinh, Thang Minh Nguyen, and Takashi Morii	
1. Introduction	288
2. DNA binding adaptor	292
3. Experimental model	299
4. Conclusion	317
References	318
13. Protein-based scaffolds for enzyme immobilization	323
Guoqiang Zhang, Sarah Schmidt-Dannert, Maureen B. Quin, and Claudia Schmidt-Dannert	
1. Introduction	324
2. Recombinant production of scaffold building blocks	327
3. Characterization of scaffold building blocks	334
4. Cargo loading onto EutM-SpyCatcher scaffolds	338
5. Scaffolding and operation of a model enzyme cascade	344
6. Building a toolbox of scaffolding building blocks	352
7. Summary and conclusion	358
Acknowledgments	359
References	359
14. Artificial scaffolds for enhanced biocatalysis	363
Qing Sun, Shen-Long Tsai, and Wilfred Chen	
1. Introduction	364
2. Nucleic acid-based scaffolding	365
3. Scaffold proteins-based metabolons	370
4. Summary and conclusion	380
References	380
15. On-pot and cell-free biocatalysis using coimmobilized enzymes on advanced materials	385
Fernando López-Gallego	
1. Introduction	386
2. Effect of both nature and chemistry of solid materials on the performance of immobilized multienzyme systems	389
3. Effect of the spatial organization on the performance of immobilized multienzyme systems	392

4. Effect of the enzyme stoichiometry on the performance of the immobilized multienzyme systems	400
5. Engineering the operational stability of immobilized multienzyme systems	401
6. Methods for immobilization, analysis, and operation of coimmobilized enzyme systems on microbeads	402
7. Conclusion and remarks	405
References	406
16. Combinatorial biosynthesis of small molecules in plants: Engineering strategies and tools	413
Iryna Gerasymenko, Yuriy Sheludko, Sabine Fräbel, Agata Staniek, and Heribert Warzecha	
1. Introduction	415
2. GoldenBraid 2.0: Synthetic biology as a driver for standardized cloning	416
3. Transient expression of foreign genes in plants: Host selection and optimization of conditions	418
4. Bifunctional GFP-lichenase reporter system for rapid and easy assessment of expression efficiency	421
5. Targeting of heterologous enzymes into cell compartments optimal for their performance	426
6. Cytochromes P450 as tools for generation of novel compounds <i>in planta</i>	427
7. Establishment of a combinatorial multimember pathway <i>in planta</i> : Heterologous production of halogenated indican derivatives	433
8. Conclusions	437
Acknowledgments	438
References	438
Further reading	442
17. Insider information on successful covalent protein coupling with help from SpyBank	443
Anthony H. Keeble and Mark Howarth	
1. Introduction	444
2. SpyDesign-- Construction of successful SpyTag/SpyCatcher reagents	449
3. Analysis of SpyTag/SpyCatcher covalent coupling reactions	456
4. Concluding remarks	458
Acknowledgment	458
Conflicts of interest	458
References	458

18. EMMA assembly explained: A step-by-step guide to assemble synthetic mammalian vectors	463
Sally Jones, Andrea Martella, and Yizhi Cai	
1. Introduction	464
2. Workflow	466
3. Design of expression vectors using the EMMA platform	466
4. Generating libraries of biological parts	468
5. Assembly of the designed expression vector	482
6. Hierarchical assembly	487
7. Combinatorial assembly	487
8. Troubleshooting	490
9. Summary	492
Acknowledgments	492
References	492
