

VOLUME SIX HUNDRED AND NINETEEN

METHODS IN ENZYMOLGY

Ubiquitin-dependent Protein Degradation

Edited by

MARK HOCHSTRASSER

*Department of Molecular Biophysics & Biochemistry,
Yale University, New Haven, CT, United States*

ACADEMIC PRESS

An imprint of Elsevier

Contents

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
1. Assays for protein retrotranslocation in ERAD	1
Sonya Neal, Sascha H. Duttke, and Randolph Y. Hampton	
1. Introduction	2
2. An in vitro assay for retrotranslocation of Hmg2-GFP	5
3. An in vivo assay for retrotranslocation of Hmg2-GFP	14
4. Characterizing the nature of retrotranslocated Hmg2-GFP	18
Acknowledgments	23
References	23
2. Methods for measuring misfolded protein clearance in the budding yeast <i>Saccharomyces cerevisiae</i>	27
Rahul S. Samant and Judith Frydman	
1. Introduction	28
2. Expression and isolation of misfolded proteins in yeast	30
3. Assays of protein clearance	34
4. Analysis of ubiquitin linkages	38
Acknowledgments	44
References	44
3. Methodologies to monitor protein turnover at the inner nuclear membrane	47
Pei-Ling Tsai, Chenguang Zhao, and Christian Schlieker	
1. Introduction	48
2. Tagging strategy for INM proteins	50
3. Fractionation of nuclei into NE and nucleoplasm	62
4. Concluding remarks	66
Acknowledgments	67
References	67
4. Assays for dissecting the in vitro enzymatic activity of yeast Ubc7	71
Bayan Mashahreh, Yuval Reiss, Reuven Wiener, and Tommer Ravid	
1. Introduction	72
2. Protein production and purification	75

3. Measurement of Ubc7 enzymatic activity	87
4. Final remarks	92
Acknowledgment	93
References	93
5. Methods for genetic analysis of mammalian ER-associated degradation	97
Dara E. Leto and Ron R. Kopito	
1. Introduction	98
2. Materials	100
3. Methods	101
4. Notes	115
Acknowledgments	117
References	117
6. A dual system to manipulate protein levels for DNA replication- and cell cycle-related studies	121
Néstor García-Rodríguez and Helle D. Ulrich	
1. Introduction	122
2. Application: Analysis of cross talk between DNA damage bypass and checkpoint signaling in the cell cycle	127
3. Experimental procedures and materials	128
4. Limitations of the dual expression-control method	138
5. Outlook	140
Acknowledgments	140
References	141
7. Engineered disulfide crosslinking to measure conformational changes in the 26S proteasome	145
Randi G. Reed and Robert J. Tomko Jr.	
1. Introduction	146
2. Assessing the impact of ATP analogs on 26S proteasome conformational distribution	148
3. Assessing the impact of proteasomal peptidase inhibitor bortezomib on 26S proteasome conformational distribution	152
4. Summary and conclusion	154
5. Notes	156
Acknowledgments	158
References	158

8. Assays for ubiquitin-like protein ligation and proteasome function in archaea	161
Xian Fu, Zachary Adams, and Julie Maupin-Furlow	
1. Introduction	162
2. Methods for assay of proteasome function in archaea	163
3. Methods for reconstitution of archaeal ubiquitin-like protein ligation	171
4. Conclusions	176
Acknowledgments	177
References	177
9. Structural mass spectrometry approaches to study the 20S proteasome	179
Gili Ben-Nissan, Shay Vimer, Mark Tarnavsky, and Michal Sharon	
1. Introduction	180
2. 20S proteasome purification protocols for native MS analysis	185
3. Native mass spectrometry approaches to characterize the 20S proteasome	197
4. Summary and perspective	217
Acknowledgments	218
References	218
10. Single-molecule methods for measuring ubiquitination and protein stability	225
Jason Hon and Ying Lu	
1. Introduction	226
2. A single-molecule fluorescence assay for detecting substrate ubiquitination by the APC/C and substrate degradation by the 26S proteasome	229
3. Purification and sample preparation	242
4. Summary	245
Acknowledgments	245
References	246
11. In vitro analysis of proteasome-associated USP14 activity for substrate degradation and deubiquitylation	249
Srinivasan Muniyappan and Byung-Hoon Lee	
1. Introduction	250
2. Purification of human proteasome	251
3. Purification of recombinant USP14 protein	255
4. Generation of fluorogenic ubiquitin adducts as model substrates for USP14 assays	256

5. Generation of ubiquitin conjugates as substrates for USP14 assays	259
6. Proteasome-associated USP14 deubiquitination assays with fluorogenic ubiquitin adducts	260
7. Proteasome-associated USP14 deubiquitination assays with ubiquitin-protein conjugates	263
8. Summary	266
Acknowledgments	267
References	267
12. Methods for studying the regulation of membrane traffic by ubiquitin and the ESCRT pathway	269
Evan L. Guiney, Lu Zhu, Richa Sardana, Scott D. Emr, and Matthew G. Baile	
1. Introduction	270
2. Auxotrophic marker fusions for monitoring and screening ubiquitin-dependent membrane trafficking	271
3. Rapamycin-induced protein degradation assay for studying membrane trafficking events downstream of ubiquitination	282
4. Concluding remarks	288
Acknowledgment	288
References	289
13. Detection of ubiquitinated targets in mammalian and <i>Drosophila</i> models	293
Elena Maspero, Valentina Fajner, Janine Weber, and Simona Polo	
1. Introduction	294
2. In vivo detection of ubiquitinated targets	295
3. In vitro detection of ubiquitinated targets	311
4. Concluding remarks	316
References	316
14. Western blot analysis of the autophagosomal membrane protein LGG-1/LC3 in <i>Caenorhabditis elegans</i>	319
Alexander Springhorn and Thorsten Hoppe	
1. Introduction	320
2. Experimental procedure	324
3. Reagents	328
4. Experimental results	328
5. Conclusions	332
Acknowledgments	333
References	333

15. Monitoring stress-induced autophagic engulfment and degradation of the 26S proteasome in mammalian cells	337
Victoria Cohen-Kaplan, Ido Livneh, Yong Tae Kwon, and Aaron Ciechanover	
1. Introduction	338
2. Monitoring the autophagosomal uptake of the proteasome by immunofluorescence	340
3. Purification of autophagosomes and autolysosomes from GFP-LC3B-expressing HeLa cells	350
4. Identification of ubiquitinated proteins and ubiquitin-modified sites on cellular proteins	358
Acknowledgments	361
References	361
