<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
<i>Acknowledgments</i>	<i>xxiii</i>

<b>1. 5-Hydroxytryptophan: A precursor of serotonin influences regional blood-brain barrier breakdown, cerebral blood flow, brain edema formation, and neuropathology</b>	<b>1</b>
Aruna Sharma, Rudy J. Castellani, Mark A. Smith, Dafin Fior Muresanu, Prasanta Kumar Dey, and Hari Shanker Sharma	
1. Introduction	2
2. Methodological considerations	5
3. Pharmacological treatments	14
4. Our observations on 5-HTP neurotoxicity	15
5. Effect of drug treatments on 5-HTP induced alteration in behavioral, physiological and cerebrovascular function	25
6. Effects of drugs on 5-HTP induced brain pathology and immunohistochemistry	30
7. Possible mechanisms of 5-HTP induced neurotoxicity	30
8. Conclusions and future perspectives	35
Acknowledgments	35
References	35
<b>2. Anesthetics influence concussive head injury induced blood-brain barrier breakdown, brain edema formation, cerebral blood flow, serotonin levels, brain pathology and functional outcome</b>	<b>45</b>
Hari Shanker Sharma, Dafin Fior Muresanu, Ala Nozari, Rudy J. Castellani, Prasanta Kumar Dey, Lars Wiklund, and Aruna Sharma	
1. Introduction	46
2. Methodological considerations	49
3. Our observations on anesthetics influence on concussive head injury	54
4. Possible mechanisms and functional significance	66
5. Conclusion and future perspectives	70
Acknowledgments	71
References	71

<b>3. Exacerbation of blood-brain barrier breakdown, edema formation, nitric oxide synthase upregulation and brain pathology after heat stroke in diabetic and hypertensive rats. Potential neuroprotection with cerebrolysin treatment</b>	<b>83</b>
Dafin Fior Muresanu, Aruna Sharma, Ranjana Patnaik, Preeti K. Menon, Herbert Mössler, and Hari Shanker Sharma	
1. Introduction	84
2. Methodological consideration	86
3. Our observations in heat stress	88
4. Possible mechanisms of neuroprotection by cerebrolysin	95
5. Conclusion and future perspectives	98
Acknowledgments	99
Conflict of interests	99
References	99
<b>4. Neuroprotective effects of a potent bradykinin B2 receptor antagonist HOE-140 on microvascular permeability, blood flow disturbances, edema formation, cell injury and nitric oxide synthase upregulation following trauma to the spinal cord</b>	<b>103</b>
Hari Shanker Sharma, Lianyuan Feng, Dafin Fior Muresanu, Rudy J. Castellani, and Aruna Sharma	
1. Introduction	105
2. Bradykinin is a mediator of edema formation	108
3. Our own observations on bradykinin B2 receptors in spinal cord injury	111
4. Methodological considerations	112
5. Pretreatment with bradykinin B2 receptor antagonist HOE-140	117
6. Statistical evaluation of data	119
7. Observations on bradykinin B2 receptor antagonist HOE-140 on spinal cord pathology	119
8. Spinal cord blood flow	127
9. Spinal cord edema	130
10. Morphology of spinal cord T9 segment	132
11. Neuronal nitric oxide synthase expression in spinal cord injury	135
12. Possible mechanisms of HOE-140 induced neuroprotection in spinal cord injury	137
13. Conclusion and future perspectives	141
Acknowledgments	142
References	142

<b>5. Potentiation of spinal cord conduction and neuroprotection following nanodelivery of DL-3-<i>n</i>-butylphthalide in titanium implanted nanomaterial in a focal spinal cord injury induced functional outcome, blood-spinal cord barrier breakdown and edema formation</b>	<b>153</b>
Seaab Sahib, Feng Niu, Aruna Sharma, Lianyuan Feng, Z. Ryan Tian, Dafin Fior Muresanu, Ala Nozari, and Hari Shanker Sharma	
1. Introduction	154
2. Early SCEP changes could predict later development of spinal cord edema	156
3. DL-3- <i>n</i> -butylphthalide is powerful neuroprotective agent	160
4. Combination of titanium implant and nanodelivery of NBP in spinal cord injury	163
5. Methodological consideration	163
6. Validity of nanomaterials for better conduction	164
7. Technological consideration	165
8. Our observations in SCI	171
9. Spinal cord motor functions after titanium implants and DL-NBP treatment	175
10. Possible mechanisms of neuroprotection in SCI and functional significance	175
11. Conclusion and future perspectives	179
Acknowledgments	180
References	180
<b>6. Leakage of the blood-brain barrier followed by vasogenic edema as the ultimate cause of death induced by acute methamphetamine overdose</b>	<b>189</b>
Eugene A. Kiyatkin and Hari Shanker Sharma	
1. Brain temperature: Basic mechanisms of brain temperature homeostasis	191
2. Brain hyperthermia induced by METH: State-dependency and environmental modulation	193
3. Changes in BBB permeability and brain water homeostasis during METH intoxication; Role of brain temperature	194
4. Conclusions and functional implications	201
Acknowledgments	204
References	204
Further reading	207

<b>7. Neuroprotective effects of 5-HT<sub>3</sub> receptor antagonist ondansetron on morphine withdrawal induced brain edema formation, blood-brain barrier dysfunction, neuronal injuries, glial activation and heat shock protein upregulation in the brain</b>	<b>209</b>
Aruna Sharma, Ranjana Patnaik, and Hari Shanker Sharma	
1. Introduction	210
2. Methodological considerations	212
3. Our observations on brain pathology in morphine withdrawal	214
4. Possible mechanisms of ondansetron induced neuroprotection	223
5. Conclusion and future perspectives	225
Acknowledgments	226
Conflict of interests	226
References	226
<b>8. Therapeutic potential of cannabinoids as neuroprotective agents for damaged cells conducting to movement disorders</b>	<b>229</b>
Mario Antonazzo, María Botta, Harkaitz Bengoetxea, José Ángel Ruiz-Ortega, and Teresa Morera-Herreras	
1. The endocannabinoid signaling system and its distribution in the basal ganglia	230
2. Mechanisms underlying neuroprotection by cannabinoids	234
3. Cannabinoids as neuroprotective agents in neurodegenerative disorders	237
4. Concluding remarks	246
References	246
<b>9. Dysfunction of serotonergic neurons in Parkinson's disease and dyskinesia</b>	<b>259</b>
Sergio Vegas-Suarez, Elena Paredes-Rodriguez, Asier Aristieta, Jose V. Lafuente, Cristina Miguez, and Luisa Ugedo	
1. Introduction	260
2. Why is the 5-HT system important in PD?	261
3. What causes toxicity in 5-HT neurons?	263
4. Is the 5-HT system involved in the progression and symptoms of PD?	267
5. Why is the 5-HT system important in levodopa-induced dyskinesia?	269
6. Conclusions	272
Acknowledgments	272
Conflict of interest	272
References	272

<b>10. New therapeutic approaches to target alpha-synuclein in Parkinson's disease: The role of immunotherapy</b>	<b>281</b>
T. Fernández-Valle, I. Gabilondo, and J.C. Gómez-Esteban	
1. Introduction	282
2. Reducing $\alpha$ -synuclein synthesis	286
3. Preventing $\alpha$ -synuclein aggregation	287
4. Promoting degradation of intracellular $\alpha$ -synuclein aggregates	288
5. Increasing degradation of extracellular $\alpha$ -synuclein. Immunotherapies against $\alpha$ -synuclein	289
6. Challenges facing clinical trials with $\alpha$ -synuclein therapies	291
7. Conclusion	292
References	293
