

VOLUME SIX HUNDRED AND TWENTY TWO

METHODS IN ENZYMOLGY

Chemical and Synthetic Biology
Approaches To Understand Cellular
Functions - Part B

Edited by

ARUN K. SHUKLA

*Associate Professor, Joy Gill Chair Professor
and EMBO Young Investigator,
Intermediate Fellow, Wellcome Trust DBT India Alliance,
Department of Biological Sciences and Bioengineering,
Indian Institute of Technology, Kanpur 208016, India*

Preface

xvii

1. Input-dependent post-translational control of the reporter output enhances dynamic resolution of mammalian signaling systems	1
Brianna E.K. Jayanthi, Wenting Zhao, and Laura Segatori	
1. Introduction	2
2. The NanoDeg platform	5
3. The NanoDeg as a module for genetic circuits	8
4. Implementation of a heat shock-inducible NanoDeg inverter circuit	19
5. Concluding remarks	23
Acknowledgments	23
References	23
2. Design and synthesis of fluorescent activity probes for protein phosphatases	29
Garrett R. Casey, Jon R. Beck, and Cliff I. Stains	
1. Introduction	30
2. Synthesis of Sox-Br and Fmoc-CSox	31
3. Synthesis of Sox-based phosphatase substrates	39
4. In vitro characterization of peptide substrates	45
5. Validation in cell lysates	50
6. Conclusions	52
Acknowledgments	52
References	52
3. Utilizing split-NanoLuc luciferase fragments as luminescent probes for protein solubility in living cells	55
Travis J. Nelson, Jia Zhao, and Cliff I. Stains	
1. Introduction	56
2. Assay design	57
3. General assay procedures	58
4. Validation of assay results by Western blotting	63

5. Conclusions	65
Acknowledgments	66
References	66
4. Engineering of a sulfotyrosine-recognizing small protein scaffold for the study of protein tyrosine O-sulfation	67
Justin Lawrie, Wei Niu, and Jiantao Guo	
1. Introduction	68
2. SH2 domain library construction	73
3. Biopanning of phage displayed SH2 domain mutants	77
4. Imaging cell surface sulfoproteins	83
5. Concluding remarks	86
Acknowledgments	86
References	86
5. Synthesis and screening of bead-displayed combinatorial libraries	91
Todd M. Doran, Paige Dickson, John Maina Ndungu, Peng Ge, Irena Suponitsky-Kroyter, Hongchan An, and Thomas Kodadek	
1. Introduction	92
2. Solid-phase synthesis of combinatorial libraries on TentaGel® beads	95
3. Synthesis of conformationally constrained compound libraries	105
4. Screening OBOC libraries	110
5. Hit validation	119
6. Conclusion	123
Acknowledgment	124
References	125
6. Visualizing the brain's astrocytes	129
Alyssa N. Preston, Danielle A. Cervasio, and Scott T. Laughlin	
1. Introduction	130
2. Genetic strategies to label astrocytes	132
3. Small molecule strategies to label astrocytes	136
4. Methods	141
5. Results and discussion	146
6. Conclusions	147
References	148

7. Modular activatable bioorthogonal reagents	153
Pratik Kumar and Scott T. Laughlin	
1. Introduction	154
2. Activatable bioorthogonal reactions/reagents	155
3. Cyclopropenes as bioorthogonal reagents for IEDDA substrates	166
4. Caged cyclopropenes: Unreactive to tetrazines, activated by light or enzymes	167
5. Protocols for HPLC assays and syntheses of caged cyclopropenes	171
6. Synthetic protocols	173
References	176
8. Engineering PEG-fatty acid stapled, long-acting peptide agonists for G protein-coupled receptors	183
Sam Lear, Zaid Amso, and Weijun Shen	
1. Introduction	184
2. Design and synthesis of a PEG-fatty acid stapled, long-acting GLP-1R agonist	190
3. Summary	196
References	196
9. Quantifying drug-target engagement in live cells using sulfonyl fluoride chemical probes	201
Lyn H. Jones, Hua Xu, and Olugbeminiyi O. Fadeyi	
1. Introduction	202
2. Target validation of the decapping scavenger enzyme (Dcp5)	205
3. Structure-based chemical probe design	206
4. Preparation of sulfonyl fluoride chemical probes	208
5. Protocols	213
6. Conclusions	217
Acknowledgments	218
References	218
10. Selection and optimization of enzyme reporters for chemical cytometry	221
Angela Proctor, Qunzhao Wang, David S. Lawrence, and Nancy L. Allbritton	
1. Introduction	222
2. Target enzyme attributes and substrate peptide selection	225

3. Iterative design approach overview	226
4. Design and synthesis of a small-scale library	228
5. Substrate characterization of candidate peptide reporters in a library	228
6. Measurement of resistance to intracellular proteases	229
7. Use of capillary zone electrophoresis for assay readout	230
8. Selection of lead peptide from small library screen	236
9. Characterization of final reporter	240
10. Additional modifications of reporter for improved utility	244
Acknowledgment	245
References	245
11. Synthetic cell-like membrane interfaces for probing dynamic protein-lipid interactions	249
Spencer T. Glantz, Erin E. Berlew, and Brian Y. Chow	
1. Introduction	250
2. Generation of phospholipid-stabilized emulsion droplets	253
3. BcLOV4 control protein expression and purification	259
4. Automated fluorescence imaging plates	262
5. Imaging dynamic membrane recruitment	264
6. Image analysis and segmentation	266
Acknowledgments	268
References	269
12. Rational engineering acyltransferase domain of modular polyketide synthase for expanding substrate specificity	271
Wan Zhang, Linjun Zhou, Chunyu Li, Zixin Deng, and Xudong Qu	
1. Introduction	272
2. Protocol	278
3. Summary and conclusion	289
Acknowledgment	290
References	291
13. Identifying potentially O-GlcNAcylated proteins using metabolic labeling, bioorthogonal enrichment, and Western blotting	293
Narek Darabedian and Matthew R. Pratt	
1. Introduction	294
2. Materials	300
3. Materials for metabolic incorporation of chemical reporters	300
4. Buffers for azide-containing MCRs	300

5. Buffers for alkyne-containing MCRs	301
6. Materials for CuAAC, biotin enrichment, elution, and preparation of samples	301
7. Metabolic incorporation of chemical reporters and preparation of cell lysates	302
8. CuAAC (1mg of total protein)	303
9. Enrichment and elution (1mg scale)	304
10. SDS-PAGE and Western blot (do not scale)	304
Acknowledgments	305
References	305
14. Optogenetic perturbation of the biochemical pathways that control cell behavior	309
Lauren L. Haar, David S. Lawrence, and Robert M. Hughes	
1. Introduction	310
2. Spatial and temporal control of subcellular cofilin activity	311
3. Optogenetic control of apoptosis	317
4. Optogenetic regulation of the cAMP-dependent protein kinase	322
5. Illumination methods for optogenetic studies	326
6. Summary	326
Acknowledgments	327
References	327
15. pH-shift stress on antibodies	329
Hiroshi Imamura and Shinya Honda	
1. Introduction	330
2. Materials	332
3. Methods	332
4. Analysis	339
5. Summary	341
Acknowledgment	343
Appendix	343
References	344
16. Small molecule target identification using photo-affinity chromatography	347
Seung-Yong Seo and Timothy W. Corson	
1. Introduction	348
2. Experimental considerations	352

3. Pulldown of cremastranone target proteins	363
4. Summary	370
Acknowledgments	370
References	370
17. Computational structural enzymology methodologies for the study and engineering of fatty acid synthases, polyketide synthases and nonribosomal peptide synthetases	375
Andrew J. Schaub, Gabriel O. Moreno, Shiji Zhao, Hau V. Truong, Ray Luo, and Shiou-Chuan Tsai	
1. Introduction to computational approaches for studying natural products	377
2. Applications in the engineering of natural product biosynthesis	386
3. Summary and future perspectives	400
References	403
Further reading	409
18. On-cell coordination chemistry: Chemogenetic activation of membrane-bound glutamate receptors in living cells	411
Ryou Kubota, Shigeki Kiyonaka, and Itaru Hamachi	
1. Introduction	412
2. Protocols	413
3. Conclusion	428
Acknowledgments	428
References	428
19. Bioorthogonal oncometabolite ligation	431
Chloe A. Briney, Susana Najera, and Jordan L. Meier	
1. Introduction	432
2. Technical aspects	434
3. Discussion	444
Acknowledgments	446
References	447
