Contents

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
1. Preparation of cooperative RNA recognition complexes for crystallographic structural studies	1
Chen Qiu, Aaron C. Goldstrohm, and Traci M. Tanaka Hall	
1. Introduction	2
2. Expression and purification of Pum-Nos-RNA ternary complexes	5
3. Crystallization and structure determination of a Pum-Nos-RNA complex	11
4. Analysis of protein:RNA crystal structures	14
5. Concluding remarks	18
Acknowledgments	19
References	19
2. Methods for thermal denaturation studies of nucleic acids in complex with fluorogenic dyes	23
Lauren M. Aufdembrink, Tanner G. Hoog, Matthew R. Pawlak, Benjamin F. Bachan, Joseph M. Heili, and Aaron E. Engelhart	
1. Introduction	24
2. Sample preparation	27
3. Thermal denaturation	32
4. Data analysis	37
5. Outlook	40
Acknowledgments	41
References	41
3. Identifying and validating small molecules interacting with RNA (SMIRNAs)	45
Matthew D. Disney, Sai Pradeep Velagapudi, Yue Li, Matthew G. Costales, and Jessica L. Childs-Disney	
1. Introduction	46
2. Two-dimensional combinatorial screening (2DCS), a library-vs.-library screening approach to select the RNA three dimensional folds that bind small molecules	47
3. Inforna: A sequence-based approach to define RNAs that are druggable from the output of 2DCS	49

4. Validating the targets of SMIRNAs in cells	54
5. Summary	63
Acknowledgment	64
References	64
4. Dynamic combinatorial chemistry as a rapid method for discovering sequence-selective RNA-binding compounds	67
John D. McAnany and Benjamin L. Miller	
1. Introduction	69
2. Dynamic combinatorial library production and use	70
3. Conclusions	82
Acknowledgment	82
References	83
5. A click chemistry assay to identify natural product ligands for pre-microRNAs	85
Amanda L. Garner, Daniel A. Lorenz, and Erin E. Gallagher	
1. Introduction	86
2. cat-ELCCA for dicer-mediated pre-miRNA maturation	87
3. Preparation of assay reagents	90
4. High-throughput screening of natural product extract libraries	93
5. Gel-based assay of dicer activity	96
6. SPR assay for pre-miRNAs	97
7. Outlook	98
Acknowledgments	98
References	98
6. Differentiation and classification of RNA motifs using small molecule-based pattern recognition	101
Giacomo Padroni, Christopher S. Eubanks, and Amanda E. Hargrove	
1. Introduction	102
2. Assay design and experimental considerations	106
3. Synthetic preparation of BFU and guanidinylated aminoglycoside	110
4. Preparation of the RNA training set	116
5. Assay protocol	118
6. Statistical methods for data analysis	120
7. PRRSM as potential structure and function prediction tool	126
8. Summary and conclusion	127
Acknowledgments	128
References	128

7. Ligand-observed NMR techniques to probe RNA-small molecule interactions	131
David R. Calabrese, Colleen M. Connelly, and John S. Schneekloth Jr.	
1. Introduction	132
2. Materials	137
3. Methods	138
4. Outlook	146
Acknowledgments	147
References	147
8. Synthetic bPNAs as allosteric triggers of hammerhead ribozyme catalysis	151
Yufeng Liang, Jie Mao, and Dennis Bong	
1. Introduction	152
2. Synthetic protocols	154
3. Design and preparation of U-site HHR constructs	163
4. Triggering HHR catalysis with bPNAs	171
5. Summary	172
Acknowledgments	173
References	173
9. Using Rosetta for RNA homology modeling	177
Andrew M. Watkins, Ramya Rangan, and Rhiju Das	
1. Introduction	178
2. Method	181
3. Worked examples	189
4. Summary	197
Appendix	197
References	203
10. Monitoring co-transcriptional folding of riboswitches through helicase unwinding	209
Christopher P. Jones, Subrata Panja, Sarah A. Woodson, and Adrian R. Ferré-D'Amaré	
1. Introduction	210
2. Design strategies for labeling sites	213
3. Preparation of biotinylated, fluorescently labeled RNA/DNA hybrid duplexes	217
4. Protocols	218

5. Summary	225
Acknowledgments	226
References	226
11. Strategies for understanding RNA recognition by X-ray crystallography and NMR methods	229
Aiai Sun, Kaiyi Huang, Luqian Zheng, and Aiming Ren	
1. Introduction	230
2. Diverse methods used for analyzing RNA recognition pattern	231
3. Equipment and chemicals	236
4. Protocol	237
5. Structure analysis	243
6. Dynamics	243
7. Summary	245
Acknowledgments	246
References	246
12. Sensitive detection of structural features and rearrangements in long, structured RNA molecules	249
Rebecca L. Adams, Nicholas C. Huston, Rafael C.A. Tavares, and Anna M. Pyle	
1. Introduction	250
2. RNA structure probes	251
3. Software for Probe-Stop-HITS computational analysis	273
4. Discussion	283
Acknowledgments	286
References	286
13. A fluorescent aminosugar to rapidly screen and study RNA binders	291
Nihar Ranjan and Dev P. Arya	
1. Introduction	292
2. High-throughput fluorescence screening	293
3. Fluorescein-neomycin (F-Neo) competition displacement assay	295
4. Experimental setup of the F-Neo competition displacement assay	299
5. Protocol	301
6. Analysis of results	306
7. Conclusions	312
Acknowledgment	312
References	312

14. The use of electrospray ionization mass spectrometry to monitor RNA-ligand interactions	315
Danielle N. Dremann and Christine S. Chow	
1. Introduction	316
2. Background, sample preparation, and ESI MS methods	320
3. Data collection and analysis	326
4. Summary	333
Acknowledgment	334
References	334
15. Design of RNA-targeting macrocyclic peptides	339
Matthew J. Walker and Gabriele Varani	
1. Introduction	340
2. Targeting RNA with macrocyclic β -hairpin peptide mimetics	342
3. Peptidomimetic targeting the BIV-TAR Tat interaction	345
4. Discovery of peptide mimetics targeting HIV-TAR	350
5. Structure-based optimization of L-22 binding affinity and specificity	357
6. Targeting other RNAs using macrocyclic β -hairpin peptides	362
7. Summary	366
Acknowledgments	367
References	367
Further reading	372
16. Molecular recognition of HIV-1 RNAs with branched peptides	373
Ashley N. Peralta, Yumin Dai, Chringma Sherpa, Stuart F.J. Le Grice, and Webster L. Santos	
1. Introduction	374
2. Design, synthesis, and high-throughput screening of a branched peptide library	377
3. Determination of binding affinity and selectivity	385
4. Determination of RNA binding sites	388
5. Conclusions	397
Acknowledgments	398
References	398
17. Sequence-specific recognition of structured RNA by triplex-forming peptide nucleic acids	401
Dziyana Hnedzko and Eriks Rozners	
1. Introduction	402
2. Sequence-specific formation of PNA-dsRNA triplex	403

3. Protocols for synthesis, purification and testing of M-modified PNA	408
4. Remaining challenges and outlook	413
Acknowledgment	414
References	415
18. Evaluating riboswitch optimality	417
Hannah Wayment-Steele, Michelle Wu, Michael Gotrik, and Rhiju Das	
1. Introduction	418
2. A thermodynamic bound for riboswitch performance	420
3. How close are current riboswitches to the thermodynamic optimum?	427
4. Going beyond thermodynamic optimality	437
5. How to evaluate riboswitch optimality	439
Appendix A Optimal activation ratio for a general model	442
Appendix B Computational prediction of activation ratios	445
References	447
