vii

1. Neuronal regulation of group 2 innate lymphoid cells and type 2 inflammation	1
Saya Moriyama and David Artis	
1. Introduction	2
2. Group 2 innate lymphoid cells (ILC2s)	2
3. Neuronal regulation of ILC2s and type 2 inflammation	3
4. Concluding remarks	6
Acknowledgments	7
References	7
2. Antibody responses to the HIV-1 envelope high mannose patch	11
Christine N. Daniels and Kevin O. Saunders	
1. Introduction	12
2. Categories of high mannose patch HIV-1 neutralizing antibodies	15
3. V3-glycan HIV-1 neutralizing antibodies against the high mannose patch	17
4. Domain-exchanged glycan-dependent HIV-1 neutralizing antibody 2G12	38
5. Mannose-restricted glycan-dependent HIV-1 neutralizing antibodies	47
6. Vaccine development targeting high mannose patch antibodies	52
7. Conclusions	58
References	59
3. Origin and function of synovial macrophage subsets during inflammatory joint disease	75
Stephan Culemann, Anika Grüneboom, and Gerhard Krönke	
1. Mononuclear phagocytes	75
2. A revised view on mononuclear phagocytes	76
3. The immunological microenvironment of the joint	80
4. Role of synovial macrophage subsets during inflammatory joint disease	83
5. Concluding remarks	89
References	91

4. Models of dendritic cell development correlate ontogeny with function	99
David A. Anderson III and Kenneth M. Murphy	
1. Introduction	100
2. Marker-based identification of murine DC progenitors	100
3. Myeloid and lymphoid origins of DC subsets	101
4. Mechanisms of dendritic cell specification	103
5. Models of cDC1 development inform function	105
6. pDC function is still a black box	108
7. Models of cDC2 subset-specific identity inform tissue-specific functions	109
8. Development will continue to inform function and guide translation	111
References	112
