

VOLUME ONE HUNDRED AND FIVE

# ADVANCES IN VIRUS RESEARCH

Complementary Strategies to  
Understand Virus Structure and  
Function

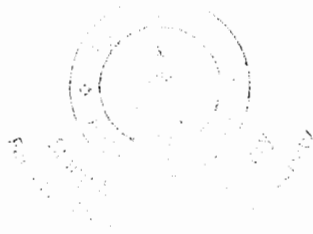

Edited by

**FÉLIX A. REY**

# Contents

<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
<b>1. The viral replication organelles within cells studied by electron microscopy</b>	<b>1</b>
Martin Sachse, Isabel Fernández de Castro, Raquel Tenorio, and Cristina Risco	
1. Introduction	2
2. Live cell imaging	5
3. General aspects of sample preparation for transmission electron microscopy	7
4. Correlative light and electron microscopy	9
5. High-pressure freezing and freeze-substitution	12
6. Frozen-hydrated sections: CemoVis and cryo-lamella	15
7. Immunogold labelling	16
8. 3D imaging/tomography	19
9. Clonable tags for electron microscopy	22
10. Conclusions and future perspectives	24
Acknowledgments	25
References	25
<b>2. Structures of enveloped virions determined by cryogenic electron microscopy and tomography</b>	<b>35</b>
Robert Stass, Weng M. Ng, Young Chan Kim, and Juha T. Huiskonen	
1. Introduction	37
2. Cryogenic electron microscopy in membrane virus research	40
3. Structures of purified virions	47
4. Enveloped virus membrane fusion	53
5. Virus budding	56
6. Neutralization	58
7. Conclusions	62
References	62
<b>3. CryoEM reconstruction approaches to resolve asymmetric features</b>	<b>73</b>
Daniel J. Goetschius, Hyunwook Lee, and Susan Hafenstein	
1. Icosahedral symmetry	74
2. Asymmetry in icosahedral viruses	75

---

3. Reconstruction approaches	75
4. Complementary methods	85
5. Summary	86
Acknowledgments	89
References	90
<b>4. Structural insights into coronavirus entry</b>	<b>93</b>
M. Alejandra Tortorici and David Veesler	
1. Introduction	94
2. Prefusion S architecture	96
3. Diversity of CoV receptors and entry mechanisms	98
4. S proteolytic cleavage	101
5. Mechanism of fusion activation	103
6. Epitope masking and glycan shielding	106
7. Concluding remarks	107
Acknowledgments	108
References	108
<b>5. Structural analysis of pleomorphic and asymmetric viruses using cryo-electron tomography and subtomogram averaging</b>	<b>117</b>
Martin Obr and Florian K.M. Schur	
1. Introduction: Structural biology of pleomorphic and asymmetric viruses	119
2. Viral asymmetry and pleomorphism	121
3. Methodological challenges for determining the structure of pleomorphic and asymmetric viruses	122
4. Elucidating retrovirus assemblies with cryo-ET and subtomogram averaging	131
5. Applications beyond retroviruses	145
6. Conclusions and outlook	151
Acknowledgments	152
References	152
<b>6. The application of atomic force microscopy for viruses and protein shells: Imaging and spectroscopy</b>	<b>161</b>
Pedro J. de Pablo	
1. Introduction	162
2. Imaging viruses with AFM	164
3. Single indentation assay	167
4. Mechanical fatigue	172
5. Genome release	176

6. pH variation and protein shell mechanics	178
7. Monitoring virus transmission: Binding and budding	180
8. Conclusions	181
Acknowledgments	182
References	182
<b>7. Structural mass spectrometry goes viral</b>	<b>189</b>
Jasmin Dülfer, Alan Kadek, Janine-Denise Kopicki, Boris Krichel, and Charlotte Uetrecht	
1. Introduction	191
2. Investigating interactions and dynamics of viral proteins using covalent labeling techniques	193
3. Protein complex formation and capsid assembly studied by native MS and allied techniques	210
4. Integrative structural modeling with MS-derived data	221
5. Future directions	225
Acknowledgments	227
References	227
<b>8. Illuminating the virus life cycle with single-molecule FRET imaging</b>	<b>239</b>
Maolin Lu, Xiaochu Ma, and Walther Mothes	
1. Introduction	241
2. Viral glycoproteins as entry and immune evasion machines	243
3. smFRET imaging of viral glycoproteins in the context of intact virions	245
4. smFRET imaging reveals that the unliganded HIV-1 Env is dynamic, having access to three distinct prefusion conformational states	246
5. Ligands identify the nature of HIV-1 Env conformational states observed by smFRET	248
6. Stepwise opening of HIV-1 Env by cellular receptor CD4 and coreceptor mimics	249
7. An asymmetric conformational state of HIV-1 Env highly vulnerable to ADCC	251
8. High-resolution structures of HIV-1 Env	252
9. Associating the conformational states observed by smFRET with high-resolution structures of HIV-1 Env	253
10. smFRET analysis of conformational changes during membrane fusion for the influenza A hemagglutinin fusion glycoprotein (HA2)	256
11. Conformational dynamics during HIV-1 reverse transcription	259

12. smFRET monitoring of conformational changes in HIV-1 genomes and capsid protein during HIV-1 Gag assembly	261
13. Concluding remarks	263
Acknowledgments	264
Author contributions	264
References	264
<b>9. Polyhedra, spindles, phage nucleus and pyramids: Structural biology of viral superstructures</b>	<b>275</b>
Fasséli Coulibaly	
1. Introduction	278
2. Inclusion bodies, viroplasm and virion superassembly	279
3. Intracellular crystals of insect viruses	284
4. Use of viral crystals in biotechnology applications	308
5. Examples of non-crystalline viral superstructures	313
6. Structural biology of viral superstructures	318
7. Conclusions	326
Acknowledgments	326
References	327
