

VOLUME EIGHTY FOUR

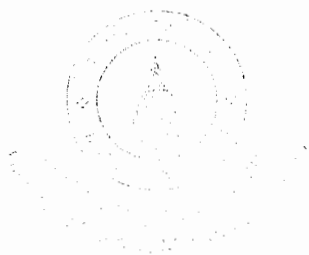

CURRENT TOPICS IN MEMBRANES

Plasma Membrane Repair

Edited by

LUCIANA O. ANDRADE

*Department of Morphology,
Federal University of Minas Gerais,
Brazil*

ELSEVIER

ACADEMIC PRESS

An imprint of Elsevier

Contents

<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
1. Lysosomes and plasma membrane repair	1
Matthias Corrotte and Thiago Castro-Gomes	
1. Plasma membrane repair—A Ca^{2+} -dependent physiological cellular response of fundamental importance	2
2. Lysosomes—Not just dealing with the trash	4
3. Linking exocytosis and endocytosis—The need to remove damage from the plasma membrane	5
4. Understanding the cell machinery that repairs the plasma membrane by endocytosis	6
5. Lysosome positioning, dynamics and exocytosis during plasma membrane repair	9
6. Lysosomal enzymes as mediators of plasma membrane repair	11
References	14
2. Actin dynamics and myosin contractility during plasma membrane repair and restoration: Does one ring really heal them all?	17
Eric Boucher, Laurence Goldin-Blais, Quentin Basiren, and Craig A. Mandato	
1. Introduction	18
2. Early PM repair events	21
3. PM restoration and cytoskeletal repair	25
4. Final words	34
Grant sponsor(s)	34
Disclosure summary	34
References	34
3. Annexins and plasma membrane repair	43
Sophia N. Koerdt, Arsila P.K. Ashraf, and Volker Gerke	
1. The relevance and origin of plasma membrane wounds	44
2. Topologies of membrane resealing	46
3. The annexin family of Ca^{2+} -dependent membrane binding proteins	49

4. Involvement of annexins in membrane wound repair	51
5. Annexin interaction partners in membrane wound repair	54
6. Conclusion	57
Author contributions	57
Funding	57
Conflict of interest	57
References	57
4. Structural and signaling role of lipids in plasma membrane repair	67
Adam Horn and Jyoti K. Jaiswal	
1. Introduction	68
2. Plasma membrane lipid composition, organization, and response to injury	69
3. Structural role for lipids during plasma membrane repair	75
4. Signaling role for lipids during plasma membrane repair	82
5. Lipids as a mediator of tissue repair	90
6. Conclusion	91
Acknowledgments	91
References	92
5. Signaling pathways involved in adaptive responses to cell membrane disruption	99
Tatsuru Togo	
1. Adaptive responses to cell membrane disruption: An overview	100
2. Short-term adaptive responses in a wounded cell	101
3. Long-term adaptive responses in a wounded cell	105
4. Short-term potentiation of cell membrane repair in cells adjacent to a wounded cell	108
5. Long-term adaptive responses in cells adjacent to a wounded cell	112
6. Conclusions and future directions	117
Acknowledgments	119
References	119
6. Natural mechanisms and artificial PEG-induced mechanism that repair traumatic damage to the plasmalemma in eukaryotes	129
Sara A. Vargas and George D. Bittner	
1. Repair of plasmalemmal damage: A brief overview	130
2. Tissues consist of membrane-bound cells	133

3. The plasma membrane is a diffusion barrier	135
4. Reliability of different measures used to assess plasmalemmal sealing	136
5. Substances or biochemical pathways that affect plasmalemmal sealing and membrane fusion	138
6. Natural cellular mechanisms involved in plasmalemmal sealing	144
7. Calcium ion influx at sites of membrane trauma activates pathways leading to cell death as well as plasmalemmal sealing	148
8. Evolutionary origin of membrane fusion proteins to seal plasmalemmal damage	149
9. Artificial sealing of traumatic plasmalemmal lesions by PEG	150
10. Long term survival of anucleate cells or cytoplasmic extensions (e.g., axons)	151
11. Natural regeneration of some severed invertebrate axons through activation of surviving distal segments by various mechanisms, including plasmalemmal fusion	153
12. Artificially induced re-innervation of severed invertebrate and mammalian axons by PEG-fusion of severed nerves	155
13. Conclusions	157
References	159
7. Damage and repair of the axolemmal membrane: From neural development to axonal trauma and restoration	169
Héctor R. Quintá and Francisco J. Barrantes	
1. Introduction	170
2. Axon development	171
3. Therapeutic approaches in axonal membrane repair in human pathologies	179
References	182
8. Alveolar epithelial cell integrity: A venerable target in the lung	187
Ian Pepper and Xiaoli Zhao	
1. Introduction	188
2. Prevention of membrane injuries	190
3. Components and mechanisms of cellular membrane repair machinery	195
4. Signals in membrane repair	196
5. Mechanisms in membrane repair	201
6. Conclusions & perspective	208
Competing financial interests	210
References	210

9. Plasma membrane repair involvement in parasitic and other pathogen infections	217
Luciana O. Andrade	
1. Introduction	218
2. <i>Trypanosoma cruzi</i> and Chagas disease	218
3. <i>Leishmania</i>	227
4. PMR role in other pathogen infections	230
5. Conclusion	232
References	232
