

VOLUME SIX HUNDRED AND TWENTY FIVE

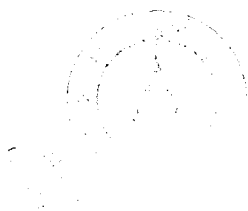

METHODS IN ENZYMولوجY

DNA Sensors and Inflammasomes

Edited by

JUNGSAN SOHN

*Department of Biophysics and Biophysical Chemistry,
Johns Hopkins University School of Medicine,
Baltimore, MD, United States*

Contents

<i>Contributors</i>	<i>xiii</i>
<i>Preface</i>	<i>xvii</i>
1. Intercellular communication in the innate immune system through the cGAS-STING pathway	1
Ramya Nandakumar, Samuel Joseph Windross, and Søren R. Paludan	
1. Introduction	1
2. cGAS-STING signaling	2
3. Immuno-signaling to neighboring cells through gap junctions	5
4. Exosomes and immune responses to virus infections	7
5. Exosomes and immune responses to bacterial infections	7
6. Concluding remarks	8
References	9
2. Analysis of human cGAS activity and structure	13
Wen Zhou, Aaron T. Whiteley, and Philip J. Kranzusch	
1. Introduction	14
2. A genetic assay for screening cGAS activity using bacteria	15
3. Crystallization and structural determination of the human cGAS–DNA complex	21
4. Crystallization of a human cGAS–DNA–ligand complex	34
5. Summary	36
Acknowledgments	36
References	37
3. Chemical synthesis, purification, and characterization of 3'-5'-linked canonical cyclic dinucleotides (CDNs)	41
Changhao Wang, Min Hao, Qianqian Qi, Yashao Chen, and Jörg S. Hartig	
1. Introduction	42
2. Synthesis of crude CDNs	46
3. Purification of crude CDNs	50
4. Characterization of CDNs	52
5. Summary and prospects	57
Acknowledgments	57
References	57

4. An SPR-based analysis of cGAS substrate K_D and steady-state K_M values	61
Erik C. Ralph and Justin Hall	
1. Introduction	62
2. Consideration for the immobilization of proteins, multimers, and the cGAS [*] ds-DNA complex	64
3. Considerations for SPR-based enzymology	65
4. Protocols	68
5. Summary	72
References	74
5. A pyrophosphatase-coupled assay to monitor the NTase activity of cGAS	77
Richard Hooy and Jungsan Sohn	
1. Introduction	78
2. Materials	80
3. Implementing the PP _i ase-coupled NTase activity assay	82
4. Summary and prospects	84
References	85
6. Tracking the polymerization of DNA sensors and inflammasomes using FRET	87
Zachary Mazanek and Jungsan Sohn	
1. Introduction	87
2. Protocols	88
Acknowledgment	93
Reference	93
7. Monitoring gasdermin pore formation in vitro	95
Shiyu Xia, Jianbin Ruan, and Hao Wu	
1. Introduction to the gasdermin family	96
2. Generation of recombinant gasdermins and proteases	99
3. Liposome leakage assay	102
4. Conclusions and discussion	104
Acknowledgments	105
References	105

8. Measuring TREX1 and TREX2 exonuclease activities	109
Wayne O. Hemphill and Fred W. Perrino	
1. Introduction	110
2. Considerations when purifying TREX1 enzymes	112
3. Purifying recombinant TREX1 enzymes	113
4. Measuring TREX1 activity on ssDNA	115
5. Measuring TREX1 activity on dsDNA with fluorescence	117
6. Visualizing TREX1 activity on dsDNA with agarose gel electrophoresis	118
7. Protocols	119
8. Calculating TREX1 exonuclease activities	127
9. Exonuclease activities of TREX1 mutant enzymes	129
10. Summary	131
Acknowledgments	131
References	131
9. Kinetics of DNA–protein association and dissociation by stopped-flow spectroscopy	135
Johannes Rudolph and Karolin Luger	
1. Introduction	136
2. Motivation	136
3. Theoretical considerations	138
4. Practical considerations	140
5. Sample preparation	142
6. Instrument operation and data collection	143
7. Experimental troubleshooting	147
8. Data analysis	148
9. Conclusions	154
Acknowledgments	154
References	154
10. Characterization of DNA bound cyclic GMP-AMP synthase using atomic force microscopy imaging	157
Alexander Lushnikov, Richard Hooy, Jungsan Sohn, and Alexey Krasnoslobodtsev	
1. Introduction	158
2. Equipment	159
3. Materials	159

4. Protocol	160
5. Atomic force microscopy imaging	162
6. Summary	165
Acknowledgments	165
References	165
11. Preparation of filamentous proteins for electron microscopy visualization and reconstruction	167
Mariusz Matyszewski and Jungsan Sohn	
1. Introduction	168
2. Construct design	168
3. Negative stain electron microscopy	171
4. Cryo-EM sample preparation	173
References	175
12. Cryo-EM studies of NAIP–NLRC4 inflammasomes	177
Nicole Haloupek, Patricia Grob, Jeannette Tenthorey, Russell E. Vance, and Eva Nogales	
1. Introduction	178
2. Preparing NAIP–NLRC4 inflammasomes for EM	179
3. Biochemical preparation	181
4. Preparation of cryo-EM grids	189
5. Cryo-EM data collection and analysis	194
6. Concluding remarks	202
Acknowledgments	202
References	202
13. An integrative protocol for the structure determination of the mouse ASC-PYD filament	205
Adam Mazur, Petr Broz, and Sebastian Hiller	
1. Introduction	206
2. Experimental data	207
3. Structure determination protocol	210
4. Effect of the cryo-EM electron density resolution on the structure quality	217
5. Summary	219
Acknowledgment	219
References	219

14. Protein interactions of the inflammasome adapter ASC by solution NMR	223
Pedro Diaz-Parga and Eva de Alba	
1. Introduction	224
2. Overexpression and purification of ASC, ASC ^{PYD} and ASC ^{CARD} in minimal media	227
3. Aspects to consider in the design of solution NMR studies of ASC, ASC ^{CARD} and ASC ^{PYD}	230
4. NMR titration experiments	236
5. Molecular docking using chemical shift perturbation data	242
6. Summary	245
Acknowledgments	246
References	246
Further reading	251
15. Tracking DNA sensor and inflammasome complexes in cells using confocal microscopy	253
Brendan Antiochos	
1. Endogenous versus exogenous protein	255
2. Sensor ligand	257
3. Inflammasome inducers	257
4. Immunofluorescence cell imaging protocols	258
5. Reagents/tools	258
6. Example protocol 1	258
7. Example protocol 2	261
8. Handling coverslips: Do's and don'ts	264
References	265
16. Assessment of inflammasome and type I IFN responses to DNA viruses and DNA PAMPS	269
Guido Massaccesi and Michael A. Chattergoon	
1. Introduction	270
2. Protocols	275
3. Analysis	279
4. Summary	281
Acknowledgment	282
References	282

17. Biochemical and microscopic analysis of inflammasome complex formation	287
Patrycja Swacha, Nelson O. Gekara, and Saskia F. Erttmann	
1. Introduction	288
2. Analysis of ASC inflammasome complexes by Western blotting	289
3. Analysis of caspase-1—ASC complexes by immunofluorescence microscopy	293
Acknowledgment	298
References	298
18. Comet and micronucleus assays for analyzing DNA damage and genome integrity	299
Hui Jiang, Swarupa Panda, and Nelson O. Gekara	
1. Introduction	300
2. The comet assay	301
3. The micronucleus assay	304
4. Summary	306
Acknowledgments	306
References	307
19. Workflows and considerations for investigating protein interactions of viral DNA sensors	309
Timothy R. Howard, Bokai Song, and Ileana M. Cristea	
1. Introduction	310
2. Experimental considerations when studying DNA sensor interactions	314
3. Protein interactions in the context of proteome changes	318
4. Materials	319
5. Methods	323
Acknowledgments	334
References	335
20. TUBE and UbiCRest assays for elucidating polyubiquitin modifications in protein complexes	339
Swarupa Panda, Hui Jiang, and Nelson O. Gekara	
1. Introduction	340
2. Isolation of ubiquitin conjugates by TUBE pulldown	341

3. Deubiquitinase based assay to determine ubiquitin linkages and their architecture	344
4. Sample analysis	347
5. Strengths and limitations	348
Acknowledgments	349
References	349
