Preface

xix

1. Crosstalk between cellular metabolism and histone acetylation	1
Sophie Trefely, Mary T. Doan, and Nathaniel W. Snyder	
1. Introduction	2
2. Internal standards in acyl-CoA analysis	5
3. Acid soluble short chain acyl-CoA extraction	9
4. HPLC-MS analysis of acetyl-CoA	11
5. Peak extraction and abundance calculation of acetyl-CoA	13
6. Mixed chain length acyl-CoA extraction	16
7. Polar metabolite extraction	17
8. Isotope tracing	18
References	19
2. Purification and enzymatic assay of class I histone deacetylase enzymes	23
Mark K. Adams, Charles A.S. Banks, Sayem Miah, Maxime Killer, and Michael P. Washburn	
1. Introduction	24
2. Histone deacetylases and HDAC inhibitors	25
3. Purifying protein for HDAC assay	26
4. HDAC activity assay	29
5. Protocol	32
6. Analysis	36
7. Summary	37
Acknowledgments	37
References	37
3. Multiplexed quantitative phosphoproteomics of cell line and tissue samples	41
Johannes Kreuzer, Amanda Edwards, and Wilhelm Haas	
1. Introduction	42
2. Materials	45

3. Methods	48
4. Notes	61
References	63
4. Differentiation of peptide isomers and epimers by radical-directed dissociation	67
Tyler R. Lambeth and Ryan R. Julian	
1. Introduction	68
2. Lens sample preparation	74
3. Bottom-up mass spectrometry	78
4. Conclusions	84
References	85
5. Biochemical analysis of protein arginylation	89
Junling Wang, John R. Yates III, and Anna Kashina	
1. Introduction	90
2. Methodological approaches to protein arginylation analysis	91
3. Bacterial expression and purification of recombinant mouse arginyltransferase (ATE1) and human Arg-tRNA synthetase (RRS) for arginylation assays	92
4. Assaying ATE1 activity in vitro	95
5. Identification of arginylated proteins by mass spectrometry	98
Acknowledgments	110
References	110
6. Site-specific determination of lysine acetylation stoichiometries on the proteome-scale	115
Yue Chen and Yunan Li	
1. Introduction	116
2. Basic principles of acetylation stoichiometry analysis	118
3. Rigorous validation of quantification accuracy	121
4. Global analysis of acetylation stoichiometry	122
5. Protocol	124
6. Data analysis	127
7. Summary	128
Acknowledgments	130
References	130

7. RNA modifications and the link to human disease	133
Amber Yanas and Kathy Fange Liu	
1. <i>N</i> ¹ -methyladenosine in tRNA	134
2. Methylated guanosines in tRNA	134
3. Pseudouridine on tRNA	135
4. 5-Methylcytosine (m ⁵ C) in tRNA	136
5. Dihydrouridine in tRNA	136
6. tRNA modifications linked to human disease	136
7. 2'- <i>O</i> -methylation in rRNA	137
8. Pseudouridine (Ψ) in rRNA	138
9. <i>N</i> ¹ -methyladenosine (m ¹ A) in rRNA	138
10. <i>N</i> ⁶ -methyladenosine (m ⁶ A) in mRNA	138
11. <i>N</i> ¹ -methyladenosine (m ¹ A) in mRNA	141
12. 5-Methylcytosine (m ⁵ C) in mRNA	142
13. Pseudouridine in mRNA	142
14. Conclusion	142
References	143
8. Isolation and characterization of glycosylated neuropeptides	147
Yang Liu, Qinjingwen Cao, and Lingjun Li	
1. Introduction	148
2. Neuropeptide extraction from crustacean neuronal tissues	151
3. Sample preparation: Glycopeptide purification and enrichment	159
4. Glycopeptide profiling by MS	173
5. Conclusions and future directions	185
Acknowledgments	186
References	186
9. Utilizing intein <i>trans</i>-splicing for <i>in vivo</i> generation of site-specifically modified proteins	203
Igor Maksimovic, Devin Ray, Qingfei Zheng, and Yael David	
1. Introduction	204
2. <i>In vivo</i> synthesis of H2B-TMR-HA using split inteins	206
3. Notes	219
4. Summary and outlook	221
Acknowledgments	221
References	222

10. Systematic and site-specific analysis of N-glycoproteins on the cell surface by integrating bioorthogonal chemistry and MS-based proteomics	223
Fangxu Sun and Ronghu Wu	
1. Introduction	224
2. Comprehensive analysis of surface N-glycoproteins by integrating metabolic labeling, copper-free click chemistry and MS-based proteomics	227
3. Protocol	231
4. Discussion	237
5. Summary	243
Acknowledgment	243
References	243
11. Silencing glycosaminoglycan functions in mouse embryonic stem cells with small molecule antagonists	249
Sourav Chatterjee, Tesia N. Stephenson, Austen L. Michalak, Kamil Godula, and Mia L. Huang	
1. Introduction: Glycosylation as a post-translational modification and proteoglycans	251
2. Mouse embryonic stem cell (mESC) differentiation as a phenotypic model screening system	253
3. Analysis of small molecule antagonism of heparan sulfate via enzyme-linked immunosorbent assay (ELISA)	254
4. Mouse embryonic stem cell (mESC) culture maintenance and differentiation	255
5. Analysis of small molecule effects toward mESC pluripotency and differentiation	259
6. Analysis of small molecule effects on mESC signaling	265
7. Conclusions and future directions	269
Acknowledgments	269
References	269
12. Biochemical and structural analysis of N-terminal acetyltransferases	271
Leah Gottlieb and Ronen Marmorstein	
1. Introduction	272
2. Preparation of recombinant NAT proteins	274

3. Kinetic analysis	279
4. Biochemical and biophysical characterization	284
5. Structural studies	290
6. Prospects and conclusion	295
Acknowledgments	296
References	296
Further reading	299
13. Site-specific analysis of the Asp- and Glu-ADP-ribosylated proteome by quantitative mass spectrometry	301
Peng Li, Yuanli Zhen, and Yonghao Yu	
1. Introduction	302
2. Materials	308
3. Protocols	309
4. Notes	313
5. Summary and perspectives	314
Acknowledgments	315
References	315
14. Analysis of the topology of ubiquitin chains	323
Lucia Geis-Asteggiane, Amanda E. Lee, and Catherine Fenselau	
1. Introduction	324
2. Protocol for sample analysis	326
3. Data processing methods	328
4. Data interpretation strategies	330
5. Applications, limitations and outlook	340
6. Summary	343
Acknowledgment	343
References	343
Further reading	346
15. Analysis of cardiac troponin proteoforms by top-down mass spectrometry	347
Timothy N. Tiambeng, Trisha Tucholski, Zhijie Wu, Yanlong Zhu, Stanford D. Mitchell, David S. Roberts, Yutong Jin, and Ying Ge	
1. Introduction	348
2. Enrichment and purification of endogenous cardiac troponin proteins from cardiac tissue	350

3. Top-down mass spectrometry analysis of cardiac troponin proteoforms	361
4. Top-down MS data analysis	367
5. Conclusions	371
References	371
16. Assays for tyrosine phosphorylation in human cells	375
Monica Kruk, Naomi Widstrom, Sampreeti Jena, Nicole L. Wolter, John F. Blankenhorn, Ibrahim Abdalla, Tzu-Yi Yang, and Laurie L. Parker	
1. Introduction	376
2. Experimental design considerations for cell-based kinase assays using delivered synthetic peptide substrate	381
3. Protocol: Measuring Abl kinase activity in human CML cells (K562) with ELISA detection	392
4. Data analysis and interpretation	399
5. Summary	401
Acknowledgments	401
References	401
17. Metabolomics analysis of lipid metabolizing enzyme activity	407
Timothy B. Ware, Myungsun Shin, and Ku-Lung Hsu	
1. Introduction	408
2. Overview and comparison of lipid extraction techniques	409
3. Total lipid extraction using Folch and Bligh and Dyer methods	412
4. Protocol	414
5. Data analysis	419
6. Summary	426
Acknowledgments	426
References	426
18. Simplified high yield TAILS terminomics using a new HPG-ALD 800K-2000 polymer with precipitation	429
Nestor Solis, Anilkumar Parambath, Srinivas Abbina, Jayachandran Kizhakkedathu, and Christopher M. Overall	
1. Introduction	430
2. Materials	432
3. Method	433

4. Notes	437
Acknowledgments	445
References	445
19. Methods for the expression, purification, and crystallization of histone deacetylase 6–inhibitor complexes	447
Jeremy D. Osko and David W. Christianson	
1. Introduction	448
2. Design of the construct and expression vector	450
3. Expression and purification of zCD2	456
4. Activity assay with a fluorogenic substrate	465
5. Crystallization of zCD2	467
6. Summary	471
Acknowledgments	472
References	472
20. Quantitative analysis of global protein lysine methylation by mass spectrometry	475
Peder J. Lund, Stephanie M. Lehman, and Benjamin A. Garcia	
1. Introduction	476
2. Materials	479
3. Procedure	481
4. Expected results	489
5. Summary	496
References	496
21. The roles of S-nitrosylation and S-glutathionylation in Alzheimer’s disease	499
Ryan R. Dyer, Katarena I. Ford, and Renā A.S. Robinson	
1. Introduction	500
2. Physiological and pathological NO	501
3. S-nitrosylation	502
4. S-glutathionylation	505
5. Proteomic methods for SNO and PSSG protein identification	506
6. SNO proteins in AD	518
7. PSSG proteins in AD	527
8. Conclusions	529
Acknowledgments	529
References	530

22. Expression of authentic post-translationally modified proteins in organisms with expanded genetic codes	539
Kyle Mohler and Jesse Rinehart	
1. Introduction	540
2. Materials	542
3. Methods and results	543
4. Conclusions and outlook	556
References	557
23. Preparation of a new construct of human histone deacetylase 8 for the crystallization of enzyme-inhibitor complexes	561
Nicholas J. Porter and David W. Christianson	
1. Introduction	562
2. Analysis of crystal packing interactions	566
3. Ligation-independent cloning of a truncated protein construct	569
4. Expression and purification of the HDAC8 ₃₋₁₄ construct	574
5. Crystallization of HDAC8-inhibitor complexes	580
6. Summary	583
Acknowledgment	583
References	583
24. Methods for characterizing protein acetylation during viral infection	587
Laura A. Murray, Ashton N. Combs, Pranav Rekapalli, and Ileana M. Cristea	
1. Introduction	588
2. Assessing global acetylome changes during the course of viral infection using anti-acetyl-lysine immunoaffinity purification and mass spectrometry	593
3. Quantify changes in site-specific acetylation levels using targeted mass spectrometry	605
4. Perspective on characterizing the biological function of specific acetylation sites	611
5. Using the <i>Fluor de Lys</i> assay to measure in vitro the enzymatic activities of deacetylases	612
6. Conclusion	616
Acknowledgments	617
References	617
