Each year, the Nature Index publishes tables based on counts of high-quality research outputs in the previous calendar year. It is important for users to understand that the data behind the tables are based on a relatively small proportion of total research papers, that they cover the natural sciences only and that outputs are non-normalized (that is, they don't reflect the size of the country or institution, or its overall research output). We encourage users to combine the free-to-access Nature Index data with information from other sources.

The tables were last updated on 7 June 2018 with the most recent institution and article corrections.

The change in adjusted FC accounts for the small annual variation in the total number of articles in Nature Index journals. FC values have been adjusted to 2017 levels to calculate the percentage change. For more information on the adjustment, please see the **Adjusted metric explainer** (<https://www.natureindex.com/news-blog/adjusted-metric-explainer>).
